Garden Planter Fitting Instructions

Step 1

Begin by fixing together the 4 side panels **A** & **B**, do this by screwing from the outside of the planter between the slats on the side panel **A** into the support on the inside of **B** as shown in diagram.

Repeat this for the 2 other side panels so that the planter stands by itself.

A total of 8 screws should be used for this step.

Step 2

Lower the base **C** into the planter, it should fit snugly and rest on the foot rests of the side panel **B**.

Don't forget to check your work with a level as you go!

Step 3

Finally fix the 4 top trim pieces **D & E** to the top of side panels **A & B** as shown in the diagrams on this page, using a screw at each end of the trim pieces.
